Hiring Team

AMETEK

Regarding Division Vice President, Information Technology, P&AI Division

AI-built AMETEK preview: russelldudek.github.io/AMETEK/

Dear AMETEK Hiring Team,

I am writing to express interest in AMETEK's Division Vice President, Information Technology role for the P&AI Division. The mandate is unusually close to the work I do best: align technology to business outcomes, make operating truth visible, and lead disciplined transformation across decentralized manufacturing environments.

At Vape-Jet, I lead AI-first operating transformation for a software-enabled hardware company where ERP records, Jira workflows, production reality, purchasing, support, engineering, field telemetry, and leadership reporting all have to reconcile. That work has required the same practical judgment AMETEK is asking for: standards without bureaucracy, data discipline without fantasy, and adoption mechanisms that survive contact with real operators.

My earlier foundation also maps well to P&AI. At Compunetics, I led engineering, production, quality, and customer-facing technical translation in a \$20M high-reliability electronics division. At Amazon, I helped launch Prime Pittsburgh, supported roughly 5M second-day orders annually, and led through the cadence, escalation, staffing, safety, and metric discipline required to reach 99.98% on-time delivery.

I would be direct about one thing. I am not representing myself as a career SAP S/4HANA program owner. I am representing something adjacent and valuable: a leader who has built ERP and workflow discipline, led manufacturing systems and operating teams, translated business needs into governed execution, and can partner deeply with corporate IT, finance, cybersecurity, data, and business unit leaders to make a major ERP transformation land.

The materials I am submitting were also created through my own AI-assisted operating workflow, with evidence checks, human review, and AMETEK-aware formatting. That is a small but concrete demonstration of how I approach AI enablement: not theater, not shortcuts, but governed output tied to a business purpose. Could we schedule a conversation about where P&AI's ERP, data, AI, and federated IT model most need disciplined transformation leadership?

Sincerely,

Russell Dudek
